

Declaration of Generative Artificial Intelligence Use

Course: DSCD 614 – Reinforcement Learning

Project Option: PPO-1 – Autonomous Vehicle Parking

Group Members:

- ADDO, Austine Gamey (22424506)
- Andrews Anseiku Junior (22427819)
- George Manuel (22424752)

Statement

Generative artificial intelligence tools were used only for limited assistance as permitted by the examination rules:

- Language polishing and grammatical editing of the project report and documentation.
- Minor code debugging suggestions and checking of syntax.
- Literature search assistance (finding relevant papers and documentation).

All core technical contributions were produced by the group members. In particular, the following were entirely original work of the group:

- Markov Decision Process formulation and justification of the state representation
- Environment wrapper design and observation construction
- Reward function choices and weighting
- Rule-based baseline implementation
- Experimental protocol, seeding strategy and evaluation harness
- Analysis and diagnosis of results
- Design of the demonstration

Any code or text suggested by AI tools was reviewed, tested, modified and verified by the group before inclusion. The group remains fully responsible for the correctness of the entire submission.

Date: September 2026
